We are the highly trained professionals you need.

DID YOU KNOW?

60% of death in confined spaces are related to those who try to rescue others. This is why the rescue team needs to be comprised of highly trained individuals.

WHY?

- They underestimate the danger
- They don't stay on guard
- They don't understand the atmospheric hazards
- They are not properly trained and they think"it's not going to happen".

IF YOU CAN'T GET OUT... YOU SHOULDN'T GO IN!

- Is your rescue team properly trained?
- Is the rescue plan going to work?
Was it tested?
- Have you planned for all possible hazards?
- Do you have the right equipment?
- Where's the anchor point?
- Can we get someone out who suffers a back/neck injury or heart attack?
- Are we compliant with the legislation?

If you hesitated with any of these questions, you should give us a call. We can help!

CONFINED SPACE RESCUE - We can help.

- PROGRAM DEVELOPMENT
- ASSESSMENTS
- ENTRY PROCEDURES
- RESCUE PROCEDURES
- TRAINING

- PERMITS
